Bogdan Tsechoev
Senior Full-Stack Engineer
Manila, Philippines | Open to any time zone | bogdan.tsechoev@gmail.com | LinkedIn | GitHub

SUMMARY:
Senior Full-Stack Engineer with 7+ years of experience building SaaS, AI, e-commerce, mobile, and internal products. Takes features end to end across React and TypeScript frontends, Node.js and Python services, PostgreSQL/PostgREST APIs, cloud deployment, and production support. Built managed monitoring and AI assistant features at Postgres.ai and previously led a 3-person frontend team at Avanti Pharma.

SKILLS:
Frontend and mobile: React | TypeScript | JavaScript | Next.js | React Native | GraphQL | Redux | MobX | Nano Stores | Material UI | HTML5 | CSS3 | Sass
Backend and data: Node.js | Express.js | Python | Flask | PostgreSQL | PostgREST | PL/pgSQL | SQL | REST | WebSocket | Stripe
AI and SaaS: OpenAI | Claude | Gemini | DeepSeek | RAG | tool calling | multi-tenancy | OAuth | RBAC | fine-grained authorization
Cloud and delivery: Docker | GCP | Hetzner | Terraform | Ansible | GitLab CI/CD | Vite | Webpack | Jest | Playwright | Cypress | Sentry
AI-assisted development: Codex | Claude Code
Languages: Russian (native), English (B2)

PROFESSIONAL EXPERIENCE

Postgres.ai - Database Lab (Apr 2024 – Feb 2026) California, Remote
US company building open-source and SaaS tools for PostgreSQL: Database Lab Engine, monitoring, AI assistant.

Senior Software Engineer

Owned full-stack delivery for 3 SaaS products: managed PostgreSQL monitoring, AI assistant and consulting issue tracker; wrote technical designs, reviewed code and supported production in a team of 8.

- Reduced setup to one required field and 3–5 minutes from subscription to a running managed PostgreSQL monitoring stack by building and launching the SaaS product from scratch on top of an open-source tool; implemented React onboarding, backend services, Stripe billing, and Ansible provisioning across AWS, GCP, and Hetzner.
- Moved 10+ consulting clients from GitLab Issues to an in-product tracker built from scratch (React, Node.js, Python), giving clients and the team one place for issues, discussions, and prepaid-hours tracking; later extended it to turn scheduled monitoring reports into client-friendly issues and verify completed action items automatically.
- Designed relational schemas and migrations and built PostgreSQL/PostgREST APIs with PL/pgSQL functions, triggers, and views.
- Extended multi-tenant RBAC, fine-grained authorization, and subscription entitlements across backend services and React interfaces; added organization-role and resource-access checks backed by SQL integration and access-control tests.
- Built the React interface and Python WebSocket layer for a customer-facing PostgreSQL AI assistant that answers database questions, analyzes and executes SQL, and models schemas. Implemented streaming, rate limiting, and error handling; contributed to multi-provider LLM integrations and multi-step tool calling.
- Kept a PostgreSQL-backed RAG knowledge base of 1.15M+ documents updated daily by building a Python ingestion service that crawls PostgreSQL documentation, blogs, and mailing lists, summarizes long content and generates embeddings.
- Cut the React build stage from about 15 to 5 minutes by migrating from Webpack to Vite and moving heavy dependencies to dynamic imports; maintained GitLab CI/CD across 8+ repositories, wrote Kubernetes manifests for Node.js and Python services, and built Terraform deployments for self-hosted monitoring on AWS and GCP.
- Raised React code coverage to about 80% with Jest, React Testing Library, and Playwright E2E for critical user paths, reducing manual regression testing before releases.
- Delivered code through AI coding agents (Codex, Claude Code), reviewing every generated change and validating it against test suites before release.
- Extended the open-source TypeScript PostgresAI CLI so external users could deploy monitoring and manage database checkups and reports from the terminal; added integration and access-control tests.

Avanti Pharma (Dec 2020 – Mar 2024) Vladivostok, Russia
Pharmacy e-commerce platform with 10,000+ products, internal business systems and mobile apps.

Senior Frontend Developer

Frontend Lead for an ecosystem spanning a 10,000+ product storefront, mobile applications, promotional landing pages, and internal operations systems.

- Led a 3-person frontend team, translating stakeholder requests into technical plans, assigning work, setting development standards, reviewing code, and managing releases; mentored 2 developers, increasing release frequency while reducing delivery time and defects.
- Delivered a 10–15% year-over-year increase in completed orders (internal analytics) by redesigning cart and checkout from heat-map insights and recommending pickup pharmacies based on order history.
- Reduced initial page-load time by about 50% on production builds through bundle optimization, code splitting, optimized fonts and images, and lighter dependencies, validating the changes with Chrome DevTools and Lighthouse.
- Owned frontend implementation of core commerce flows for a catalog of 10,000+ products, including search, cart, checkout, delivery, loyalty, promotions, and recommendations using React, TypeScript, and GraphQL; integrated card, QR, and pay-at-pickup options, handling payment redirects, return flows, and status-specific UI.
- Shipped a React Native e-commerce app to App Store and Google Play in about 5 months, from architecture to release.
- Built SEO-focused promotional landing pages with Next.js, selecting SSR or SSG based on content update frequency and serving content from an internal admin API; implemented metadata, sitemaps, image optimization, and reusable components.
- Replaced manual work and several separate tools for about 100 employees with an internal React operations portal for sales analytics, catalog and promotion management, and customer requests.

House VL (Jul 2019 – Dec 2020) Vladivostok, Russia
Web development studio building e-commerce and corporate websites for client businesses.

Junior Frontend Developer

- Built the frontend from scratch for 6–7 client projects at a web development studio, including e-commerce and corporate websites using React and Next.js; implemented responsive interfaces, REST API integrations, and server-side rendering for SEO.

EDUCATION

Far Eastern Federal University Vladivostok, Russia
Master's degree, Computer Science (2019 – 2021)
Bachelor's degree, Mathematics and Computer Science (2015 – 2019)
